Global Garner

Project Brief

GlobalGarner Platform is intended to support all segments of society. As economy is moving but not giving any benefit to common people but with global garner every user who will use our services will be benefited as we give 100% Cash Back through the movement of the economy via Global Garner. This is very unique concept of getting 100% cashback where user is only concerned with his shopping of mandatory products and services which till Today was giving him nothing but, with globalgarner gets 100% cashback by just buying product and services from the vendors listed on www.globalgarner.com

Customers /User : Choice of All Best Brands and Services - Global, National & Regional at Best discounted Price and then 100% Cashback on their spending's with no upper limit from best sellers and service providers both ONLINE AND OFFLINE STORE

Vendors /Business : Gets 100% Free Marketing , Advertisements and Sales Services to source New Customers and Retain them as minimum offer that they can give to their customers would 100% Cashback form Global Garner. Responsibility of 100% cashback is of Global Garner Vendor just has to pay agreed commission only to enable his customer to get cashback from Global Garner.

Channel Partners : Gets Great Earnings by promoting Regional Vendors and Brands

Technologies used within the project:

Laravel 5.3, Lumen, MySQL, HTML5, Bootstrap, jQuery.

Role

Understand clients requirement and convert function requirement to technical terms for team. Work with team of around 20 developers for resolving technical queries. Worked mainly on Wallet functionality and Channel Partners Module.

Vendors Depot

Project Brief

VendorsDepot.com is the one-stop shop for the hospitality industry, connecting buyers with vendors. Providing brand-approved products for your portfolio of national franchises to custom contract solutions for your boutique hotel. Offering procurement professionals thousands of brand name products and services, Vendors Depot is where vendors compete for your business based on product selection price and delivery.

Technologies used within the project

Laravel 5.2, MySql, HTML5, Bootstrap, jQuery.

Role

Understand clients requirement and convert function requirement to technical terms for team. Work with team for resolving technical queries.

Affiliate Software

Project Brief

It is a web-based platform that helps you create and manage an affiliate/referral program for your business. It's basically a sales tracking software. It is a **SaaS** project that has common delivery model. For every company registration, it creates a subdomain for the company and company can have multiple affiliate users for the promotion of the referral programs.
